TITLE

: LAMINATED DECORATIVE SHEET MADE OF POLYESTER RESIN

ABSTRACT: PROBLEM TO BE SOLVED: To provide a laminated decorative sheet made of a polyester resin improving the solvent-resistant characteristics of an amorphous polyethylene terephthalate resin and also excellent in thermal processability such as membrane press

moldability or the like.

SOLUTION: A laminated decorative sheet made of a polyester resin is constituted by larminating a substrate film layer based on an amorphous polyester resin and a protective film layer based on a transparent amorphous polyester resin. In this case, the protective film layer consists of 40-95 wt.% of an amorphous polyester resin obtained by copolymerizing a dicarboxylic acid component comprising terephthalic acid and a diol component comprising 25-35 mol% of 1,4-cyclohexanedimethanol and 65-75 mol% of ethylene glycol and 5-60 wt.% of at least one kind of an amorphous polyester resin selected from a polyethylene terephthalate resin having crystallinity and a polybutylene terephthalate resin. This laminated decorative sheet has good moldability.
